

Patient information sheet - Botox

Botox injections can take years off your face in a procedure that takes a matter of minutes. Unlike cosmetic surgery, Botox is safe and virtually non-invasive.

Can anyone have Botox treatment?

Botox treatment is now common for both men and women, however, we discourage anyone under the age of 30 from undergoing treatment. Pregnant women should also not undergo Botox treatment as the effects on the unborn child are unknown.

How does Botox treatment work?

Botox is derived from Botulinum toxin type A, the substance produced by the bacteria that causes the paralysing illness botulism - it's this paralysing effect that is safely used to relax the facial muscles that cause frown lines, wrinkles, crow's feet and lip (smoker) lines. During treatment, very low doses of Botox are administered via a few tiny injections directly into the muscles that cause those stubborn lines. Those muscles are then paralyzed for a period of time and any lines temporarily go away.

How long does it last?

Treatment takes around 15 minutes and the results can last up to 5 months or longer.

Does it hurt?

Botox injections may at most cause mild discomfort for a short while but unlike invasive cosmetic surgery there are no scars left or evidence of treatment.

Are there any possible side-effects?

Suffering a reaction to Botox is rare but the most common side effects could include temporary eyelid droop and nausea. Localized pain, infection, inflammation, tenderness, swelling, redness, and/or bleeding/bruising may be associated with the injection. Serious heart problems and allergic reactions are extremely rare.

Who can administer Botox treatment?

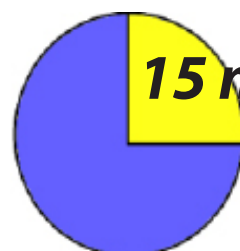

Only a trained medical professional should ever have access to Botox and provide treatment. At Rejuvenate we provide you with the assurance of being treated by experienced medical practitioners within an entirely clinical environment.

What else can I get Botox treatment for?

Botox has also been found to be particularly effective at providing relief to headache and migraine sufferers. If you, or someone you know suffers from migraines, please call us for more details.

How do I start Botox treatment?

Botox treatment by Rejuvenate is available at either Leeds City Dental Care in Beeston, convenient for the city centre, or at Farsley Dental Practice, just off the Leeds outer ring road. We look forward to seeing you!
